DECLARATION ON PACKAGING PURCHASED AND USED

Regulation (EU) 2025/40 on packaging and packaging waste

Chimica Pomponesco S.p.A., with its registered office at Via delle Industrie No. 1, 46030 Pomponesco (MN), VAT No. 02039570201, purchases packaging and uses it to package and/or dispatch its products.

This declaration relates exclusively to the codes and configurations made available on the company's website, following the completion of checks and the identification of the required evidence.

1 Identification and traceability

Chimica Pomponesco S.p.A. has identified purchased packaging and components by means of description, code, supplier and purchase references. It links the configuration actually used to the products or orders and retains the relevant versions of supplier information.

2 Role and compliance documentation

For each configuration, Chimica Pomponesco S.p.A. has identified the person responsible for the conformity assessment and the EU Declaration of Conformity in accordance with the PPWR. It retains and makes available information on the documents received, the issuing party, the date, the version and the components to which they relate. Should Chimica Pomponesco S.p.A. act as the manufacturer for a final configuration, it shall make available, prior to placing the product on the market, the technical documentation, the assessment and the EU Declaration of Conformity in accordance with Annex VIII.

3 Substances and metals Article 5

The verification of substances present in packaging includes, for the relevant codes, the information and restrictions set out in Article 5. The overall limit of 100 mg/kg for lead, cadmium, mercury and hexavalent chromium is certified for the specific type solely on the basis of a declaration or other relevant evidence provided by the manufacturer. Information on additional substances of concern is required from suppliers in relation to materials, additives, coatings, inks and adhesives actually present.

4 PFAS in food-contact packaging Article 5

Chimica Pomponesco S.p.A. has verified and recorded, for each type, whether the packaging is intended to come into contact with food. If it is, it obtains the necessary documentation to assess the PFAS restriction set out in Article 5, including the applicable thresholds and any analytical test results. If it is not, it records the intended use that justifies the inapplicability of this specific restriction. This document generally certifies the absence of PFAS in the packaging used.

5 Design and use requirements

Depending on the materials and function of the packaging, Chimica Pomponesco S.p.A. has identified the applicable requirements regarding recyclability (Article 6), recycled content in plastic packaging (Article 7), compostability for the relevant types (Article 9), reduction in weight and volume (Article 10) and reusability (Article 11). For grouped, transport or e-commerce packaging, it also takes into account the requirements regarding empty spaces () and, where relevant, reuse targets. The applicability and effective date of each requirement are assessed by type.

6 Materials and labelling

Chimica Pomponesco S.p.A. has identified the materials and verified the information to be affixed to the packaging in accordance with the provisions applicable to the market and the date of placing on the market, including the labelling requirements of Article 12 where applicable. Components added during packaging, such as films, strapping, labels, tapes or protective materials, are taken into account when determining the final configuration.

7 Updates and responsibilities relating to waste

Any change in supplier, material, structure, component, intended use or market requires a review of the documentation. La Chimica Pomponesco S.p.A. has separately assessed its obligations regarding extended producer responsibility, registration and reporting in the markets where it places packaged products.

This declaration does not replace the EU declaration of conformity issued by the party acting as the manufacturer.
